

INTEGRATING CONNECT

WITH EXISTING RELIABILITY PROGRAMS

If you're building or expanding a reliability program, the last thing you need is a wireless condition monitoring system that locks you into a rigid platform or forces you to abandon the tools you already trust. That's why CTC Connect was developed to be different - a wireless vibration monitoring system that plays well with others.

BUILT TO BE SOFTWARE AGNOSTIC

From the very beginning, we designed CTC Connect with one core principle: freedom of integration. Across our global customer base, the common frustrations we heard were:

"Once you choose a wireless provider, you're locked into their ecosystem."

"We were forced to pay recurring data fees with no option to store or manage our data locally."

We knew we had to break that model. That's why CTC Connect is software agnostic. Our platform doesn't dictate how or where you store your data, or what software you need to use to analyze it. Instead, we put the control in your hands.

STORE YOUR DATA YOUR WAY - WITH NO HIDDEN FEES

With CTC Connect, you decide where you own your data.

Choose to:

- ☒ **Store data locally on your own internal network**
- ☒ **Push data to your private cloud environment**

There are no storage fees and requirements to route your data through CTC-controlled servers. Your data belongs to you.

SEAMLESS INTEGRATION THROUGH OPEN API

To make integration as smooth as possible, we offer a simple, well-documented API. Our API guide is available on our website and does not require purchase to download.

Our API is designed to make integration easy between our hardware and your software. Additionally, our gateway can support MQTT IoT Protocol and a WebSocket Connection for data transfer.

Whether you're an OEM software company looking for a quality hardware pairing, a reliability team looking to create a tailored internal solution for your plant(s), or an end user looking for a simple and cost-effective solution for basic device management and vibration analysis, our product line serves all purposes.

THE BOTTOM LINE: CTC CONNECT WORKS WITH YOU

CTC Connect isn't just a wireless vibration monitoring solution, it's a tool that fits into your existing reliability ecosystem without disruption.

By giving you full control over your data, open access to integration tools, and a flexible web app at no cost, we've created a system that empowers your team instead of locking it down.
