

China RoHS

China Restriction of Hazardous Substances (RoHS) requires identification and marking of products containing ten specific substances above threshold. For Electronic and Electrical Products (EEPs) placed on the market in China, identification includes a table disclosing toxic or hazardous substances contained in a product, as well as EFUP (Environment-Friendly Use Period) marking that indicates the years the product is environmentally friendly before the substances may be compromised (Legal Reference: SJ/T 11364-2014: Marking for the Restricted Use of Hazardous Substances in Electronic and Electrical Products).

Substance/Substance Group	Threshold
Cadmium/Cadmium Compounds (Cd)	0.01% at homogeneous material level
Lead/Lead Compounds (Pb)	0.1% at homogeneous material level
Hexavalent chromium and Compounds (Cr6+)	0.1% at homogeneous material level
Mercury/Mercury Compounds (Hg)	0.1% at homogeneous material level
Polybrominated biphenyls (PBB)	0.1% at homogeneous material level
Polybrominated diphenyl ethers (PBDE)	0.1% at homogeneous material level
Bis(2-ethylhexyl) phthalate (DEHP)	0.1% at homogeneous material level
Butyl benzyl phthalate (BBP)	0.1% at homogeneous material level
Dibutyl phthalate (DBP)	0.1% at homogeneous material level
Diisobutyl phthalate (DIBP)	0.1% at homogeneous material level

This declaration applies to the substance list version as of January 1, 2026.

Connection Technology Center, Inc. certifies that its supply base does not use any of the substances listed above on all product lines except piezo-ceramic based sensors. Our piezo accelerometers, velocity sensors, and loop power sensors use a ceramic containing over 50% lead by volume and are therefore not China RoHS complaint.
